EDUCATION

Vellore Institute of Technology

BTech in Computer Science And Engineering — CGPA: 8.39/10

Bhopal, India

Sept. 2024 – Present

EXPERIENCE

Software Developer Intern

May 2026 – Jul. 2026

Brackets

Remote, India

- Built the authentication layer for the company's Unisource ERP platform, redirecting unauthorized users to the login page and persisting sessions for logged-in users.
- Developed the user profile and account section, including logout functionality, and fixed sign-up button animation issues.
- Implemented user management with individual CRUD permission toggles and soft-delete support, and built the corresponding admin UI pages, including create/edit permission toggles for a buyers page.
- Designed an identity-based access control (IBAC) system with baseline permission checks, enabling real-time hiding of UI features for users without the required permissions.
- Migrated the admin section and then the entire system from direct database calls to a unified API-based architecture.
- Built a notification centre for the platform and developed a newsletter page.

PROJECTS

E-Commerce Backend API | *Java 21, Spring Boot, Redis, MySQL, Docker*

Dec. 2025 – Jan. 2026

- Built a Spring Boot backend using JWT access and refresh token authentication with Redis for token storage and session management.
- Implemented Role-Based Access Control (RBAC) for Users, Sellers, and Admins, including a seller approval workflow secured using Spring Security.
- Added product filtering by brand, category, and price along with OTP verification using Redis expiration logic for temporary data storage.
- Implemented order lifecycle restrictions (e.g., preventing cancellation during transit) and containerized the application using Docker Compose.
- Structured the application using Controller, Service, and Repository layers to maintain clean separation of concerns across 15+ REST endpoints.

Community Blogging Platform API | *Java, Spring Boot, SSE, Docker, Swagger*

Nov. 2025 – Jul. 2026

- Engineered a modular REST API across 10 core domain entities (users, posts, comments, follows, likes, notifications, reports) using Spring Boot, Spring Security (JWT), and Spring Data JPA.
- Replaced polling-based updates with a push-based real-time notification system using Server-Sent Events (SSE) for likes, comments, and follows.
- Built a multi-channel feed engine including global discovery, personalized following-based timelines with mute filtering, and an affinity-based recommendation engine.
- Implemented stateful JWT invalidation via a password-versioning mechanism enabling global multi-device logout, and added OTP-based email verification for registration and password recovery.
- Introduced a Super Admin role for multi-tier administration, refactored the soft-delete system to preserve nested comment thread integrity, and built a JUnit/Mockito test suite covering service-layer logic.

TECHNICAL SKILLS

Languages: Java, SQL (MySQL), Python, C/C++, JavaScript

Frameworks: Spring Boot 3, Spring MVC, Hibernate ORM, Spring Security

Developer Tools: Docker, Git, Redis, Postman, IntelliJ IDEA, Maven, Swagger UI

Concepts: RESTful APIs, OOPS, DBMS

CERTIFICATIONS & ACHIEVEMENTS

Spring Boot 3, Spring 6 & Hibernate for Beginners – Udemy

Nov 2025

Spring Boot REST APIs: Building Modern REST APIs – Udemy

Dec 2025
